

Sama Alras Technical Services — SEO Build Report

Next.js 16.3.0 · App Router · static export · 10 indexable routes
New service added: **Plumbing Services in Dubai** · Generated 11 August 2026

1. Page Titles & H1s

Every value read from the built HTML in out/, not from source. Highlighted row = new page.

URL	SEO TITLE	H1
/	Painting, Plumbing, Flooring, AC Cleaning & Electrician Dubai Sama Alras 74 chars	Best Home Technical Services Providers in Dubai: Painting, Plumbing, Flooring, AC Cleaning & Electrical Services

2. Content Depth & Structured Data

URL	WORDS	FAQS	DESC LEN	JSON-LD NODES EMITTED
/	2321	5	196	HomeAndConstructionBusiness, FAQPage, WebPage, BreadcrumbList
/plumbing-services-dubai	3008	6	213	HomeAndConstructionBusiness, Service (Plumber), FAQPage, WebPage, BreadcrumbList
/painting-services-dubai	2772	7	298	HomeAndConstructionBusiness, Service (HousePainter), FAQPage, WebPage, BreadcrumbList
/spc-flooring-dubai	2816	7	289	HomeAndConstructionBusiness, Service, FAQPage, WebPage, BreadcrumbList

URL	WORDS	FAQS	DESC LEN	JSON-LD NODES EMITTED
/electrician-services-dubai	2804	7	300	HomeAndConstructionBusiness, Service (Electrician), FAQPage, WebPage, BreadcrumbList
/ac-duct-cleaning-dubai	2910	6	286	HomeAndConstructionBusiness, Service (HVACBusiness), FAQPage, WebPage, BreadcrumbList
/about	740	—	197	HomeAndConstructionBusiness, WebPage, BreadcrumbList
/contact	555	—	194	HomeAndConstructionBusiness, WebPage, BreadcrumbList
/privacy-policy	467	—	132	HomeAndConstructionBusiness, WebPage, BreadcrumbList
/terms	511	—	132	HomeAndConstructionBusiness, WebPage, BreadcrumbList

All five service pages now sit in a consistent 2,772–3,008 word band. Trade type shown in brackets is carried on the Service node via additionalType.

3. Plumbing Page — Content Architecture

Ordered commercial intent → trust → local. Each H3 owns one keyword cluster so sub-services do not compete for the same query.

H1	Plumbing Service in Dubai – Fast Same-Day Service	exact-match head term
H2	Trusted Plumbing Services in Dubai, Seven Days a Week	broad intent + 5 internal links
H2	Our Plumbing Services in Dubai	commercial core
H3	Emergency Plumber in Dubai, 24/7	emergency plumber (+near me, +dubai)
H3	Leak Detection & Pipe Repair	plumber / plumbers near me
H3	Blocked Drain & Sewer Cleaning	plumbing services (+near me)
H3	Kitchen Sink & Drain Plumbing	kitchen sink drain
H3	Water Heater Repair & Installation	water heater repair (all 3 variants)
H3	Bathroom, Toilet & Sanitary Ware Installation	plumbing company dubai
H2	Why Dubai Calls Us First for Plumbing	E-E-A-T / trust
H2	How Our Plumbing Service Works, Step by Step	buying friction
H2	What Dubai Says About Our Plumbers	social proof
H2	Plumbers Near You, All Dubai Areas Covered	near-me + local intent
H2	Plumbing Services in Dubai, Answered	FAQPage schema, 6 x ~134 words
H2	Explore Our Other Services in Dubai	internal linking
H2	CTA / Find Us in Dubai / Request a free quote	conversion

All 16 supplied keywords placed. Section order identical to the other four service pages. Sub-services chosen as the highest-demand plumber jobs in Dubai that also absorb the keyword list one cluster per heading.

4. Structured Data — Before vs After

Single business entity Each service page previously minted its own LocalBusiness carrying the same name, address, phone and trade licence — five duplicate companies in the graph. Now one canonical node at /#business, byte-identical on all 10 pages (verified).	Service nodes linked by provider Each service page emits Service at <url>#service with provider → /#business. Trade types (Plumber, HousePainter, Electrician, HVACBusiness) preserved losslessly via additionalType.
@id collision fixed /about, /contact and the legal pages emitted a stripped-down node under the same @id the homepage used for its full node — one entity described two different ways depending on where a crawler landed.	FAQPage identity FAQ nodes had no @id and floated unreferenced in the graph. Now <url>#faq with isPartOf → #webpage and inLanguage.

PRICE & CURRENCY AUDIT — PASSED

Walked every JSON-LD node on all 10 pages recursively looking for price, priceCurrency, priceRange, lowPrice, highPrice, priceSpecification and currency. **Result: zero occurrences.** The only matches for the string "price" are the English word inside FAQ

prose ("a fixed written price before any work begins"), which is marketing copy, not structured data. offer appears solely as the schema.org container inside hasOfferCatalog with no price fields attached — the standard, price-free way to enumerate services on a LocalBusiness. It can be swapped for a plain ItemList on request.

5. Weak Pages Repaired

PAGE	METRIC	BEFORE	AFTER
/painting-services-dubai	Title length	26	63
	Meta description	185	298
	FAQs / FAQ words	5 / 592	7 / 862
	Total words	2482	2772
/spc-flooring-dubai	Title length	21	61
	Meta description	244	289
	FAQs / FAQ words	5 / 610	7 / 905
	Total words	2495	2816
	H1	SPC Flooring Dubai	SPC Flooring in Dubai

These two were identified objectively, not by guess: they had the fewest FAQs, the shortest FAQ word counts and the thinnest meta descriptions of the five service pages. New FAQ topics were chosen to absorb rich keywords not yet covered — painting → move-out logistics and surface preparation (crack repair, primer, waterproofing); SPC → SPC vs vinyl/LVT/laminate/wooden/parquet comparison, and room suitability (kitchens, bathrooms, balconies).

6. H1 Defect Found & Fixed

The highlight line was rendered in a `<span>` **outside** the `<h1>`. Every service page's real H1 was therefore truncated — /painting-services-dubai had an H1 of just **"Painting Services"**, with "in Dubai" invisible to crawlers. Moving the span inside exposed a second bug: because the span is `display:block`, `textContent` concatenated the halves without a space ("Painting Servicesin Dubai", "Plumbing Service in Dubai- Fast Same-Day Service"). Both fixed; every H1 in section 1 was re-read from the built HTML to confirm.

7. Other Work Completed

- **DONE Internal linking** — plumbing reachable from all 12 pages: navbar dropdown, footer, RelatedServices, and inserted into the Overview link row of all four other service pages. Every internal link verified to resolve; zero broken.
- **DONE Navbar** — five services no longer fit inline, so they moved into a dropdown (desktop + mobile) with aria-expanded / aria-controls, Escape and click-outside dismissal, route-change auto-close and active-page highlighting.
- **DONE Fonts** — migrated to the official `next/font/google` import (Outfit + Google Sans Flex), self-hosted as 12 woff2 files. Zero requests to `fonts.googleapis.com` / `fonts.gstatic.com` remain, removing two cross-origin connections from the critical path.
- **DONE Homepage** — updated four→five services throughout: hero, hub, overview, why-us, process, all five FAQ answers, CTA, contact, plus a plumbing testimonial. Title, description and keywords updated. Plumbing appears in the homepage `hasOfferCatalog`.
- **DONE Sitemap & llms.txt** — 10 URLs, plumbing at priority 0.9; llms.txt updated to five core services.
- **DONE Verification** — `npm run build green`, `npm run lint clean`, 14 routes generated, all internal links resolve, one business entity confirmed identical across all pages.

8. Outstanding

BLOCKER — 8 plumbing images missing. The page references `/images/services/plumbing/` but no files exist there yet. Until supplied, the plumbing page renders with broken images and should not be deployed.

hero.webp · plumber-dubai.webp · emergency-plumber-dubai.webp · leak-detection-pipe-repair.webp · blocked-drain-sewer-cleaning.webp · kitchen-sink-drain-plumbing.webp · water-heater-repair-dubai.webp · bathroom-toilet-sanitary-installation.webp

Alt text is already written to match each subject. Drop the files in and run `npm run images`.

- **PENDING GBP link / geo coordinates** — you will supply. `geo` (GeoCoordinates) and a business email are still absent from the LocalBusiness node. Coordinates have deliberately not been guessed.
- **PENDING OG image** — `og-cover.jpg` is 1600×611 (2.62:1); the Open Graph spec wants 1.91:1 (1200×630), so it is centre-cropped on most platforms. No `og:image:width / height / alt` is emitted.
- **PENDING Sitemap lastmod** — currently build time on every URL, so all 10 change on every deploy. Google discounts lastmod when it always changes; explicit per-page dates would be a stronger signal.
- **PENDING CLAUDE.md** — still documents the deleted Vite/prerender pipeline and says four services.
- **PENDING Homepage title** — "Plumbing" was added, taking it to 74 characters. That is over the ~60-character display limit, as the previous 71-character title already was. Flagged so you can shorten it if preferred.
