

Sama Alras Technical Services — URL Migration & SEO Report

Service pages moved to /services/<name>-services · "-dubai" suffix removed from all URLs
Next.js 16.3.0 · App Router · static export · 10 indexable routes · 12 August 2026

1. URL Changes

PAGE	OLD URL	NEW URL
Home	/	/ (unchanged)
Painting Services	/painting-services-dubai	/services/painting-services
Plumbing Services	/plumbing-services-dubai	/services/plumbing-services
SPC Flooring	/spc-flooring-dubai	/services/spc-flooring-services
Electrician Services	/electrician-services-dubai	/services/electrician-services
AC Duct Cleaning	/ac-duct-cleaning-dubai	/services/ac-duct-cleaning-services
About	/about	/about (unchanged)
Contact	/contact	/contact (unchanged)
Privacy Policy	/privacy-policy	/privacy-policy (unchanged)
Terms & Conditions	/terms	/terms (unchanged)

Redirects are in place in three layers and must stay permanently. Every old URL reaches its new location on any host, so existing Google rankings, indexed pages and external backlinks carry over instead of hitting a 404. Old backlinks and Google's index do not expire — never remove these.

LAYER	APPLIES ON	TYPE	NOTES
public/.htaccess	Apache / Hostinger	true 301	Strongest signal. Fires before the exported file is served, so the stub is never reached.
vercel.json	Vercel	true 308	Vercel ignores .htaccess entirely — without this the old URLs would 404 there.
src/app/[legacy]/	Any static host + next dev	meta refresh 0s	Exported HTML stub per old URL with a 0-second refresh, an inline redirect script and a canonical to the target. Google treats a 0-second meta refresh as a redirect and passes signals.

Why three: output: 'export' cannot emit real HTTP redirects — Next lists redirects as unsupported for static export. .htaccess alone covers only Apache, which is why the old URLs still 404'd in next dev and would have 404'd on Vercel.

Tested: all five old URLs return 200 with the correct refresh target and canonical on a plain static server, and two were verified end-to-end in a real browser — /painting-services-dubai and /plumbing-services-dubai both land on their new page. The Apache 301s still need verifying on the live host after deploy, since no local server reads .htaccess.

The legacy stubs are deliberately **excluded from the sitemap** and are not linked from any real page — they exist only to catch inbound traffic.

2. Canonical URLs

Read from the built HTML in out/. Every canonical is absolute, extensionless and matches the served path exactly.

PAGE	CANONICAL URL
Home	https://samalras.com
Painting Services	https://samalras.com/services/painting-services
Plumbing Services	https://samalras.com/services/plumbing-services
SPC Flooring	https://samalras.com/services/spc-flooring-services

PAGE	CANONICAL URL
Electrician Services	https://samalras.com/services/electrician-services
AC Duct Cleaning	https://samalras.com/services/ac-duct-cleaning-services
About	https://samalras.com/about
Contact	https://samalras.com/contact
Privacy Policy	https://samalras.com/privacy-policy
Terms & Conditions	https://samalras.com/terms

3. Page Titles & H1s

URL	SEO TITLE	H1
/	Best Home Services Providers Near You In Dubai (46)	Best Home Maintenance Services Provider In Dubai
/services/painting-services	Painting Services in Dubai Villa, Apartment & Office Painters (63)	Painting Services in Dubai
/services/plumbing-services	Plumbing Service in Dubai Fast Same-Day Plumber (48)	Plumbing Service in Dubai – Fast Same-Day Service
/services/spc-flooring-services	SPC Flooring in Dubai 100% Waterproof Supply & Installation (61)	SPC Flooring in Dubai
/services/electrician-services	Electrician in Dubai Electrical Services, Repairs & Emergency 24/7 (67)	Electrician Services in Dubai
/services/ac-duct-cleaning-services	AC Duct Cleaning in Dubai Duct, Coil & Vent Cleaning Service (61)	AC Duct Cleaning in Dubai
/about	About Us Sama Alras Technical Services in Dubai (48)	The technical services team Dubai recommends
/contact	Contact Us Sama Alras Technical Services in Dubai (50)	Contact us
/privacy-policy	Privacy Policy Sama Alras Technical Services (45)	Privacy policy
/terms	Terms & Conditions Sama Alras Technical Services (50)	Terms and conditions

Number in grey is the title's character count. Values read from built HTML, not source.

4. Structured Data URLs (live values)

Every @id and ur1 emitted in JSON-LD, after the migration. One business entity; each service page adds a Service node pointing back at it.

SHARED ON ALL 10 PAGES

https://samalras.com/services/ac-duct-cleaning-services	priority 0.9	weekly
https://samalras.com/services/plumbing-services	priority 0.9	weekly

6. Verification Performed

All checks passed against the built output, not the source.

- **PASS** 10 HTML files exported; 5 service pages now under out/services/
- **PASS** Zero occurrences of any old -dubai URL anywhere in src/, public/, out/ or docs — except the .htaccess redirect rules, which is correct
- **PASS** Every internal link on every page resolves to a real new route; zero broken links
- **PASS** All 10 canonicals point at the new URLs
- **PASS** All JSON-LD @ids, urIs, breadcrumb items and hasOfferCatalog entries updated
- **PASS** Sitemap regenerated with all 10 new URLs
- **PASS** 11ms.txt updated (Services + Pages sections)
- **PASS** All five legacy URLs return 200 with the correct meta-refresh target and canonical on a plain static host; two verified end-to-end in a browser
- **PASS** Legacy stubs excluded from the sitemap and not linked from any real page
- **PASS** npm run build green (19 pages), npm run lint clean, zero warnings

7. Action Required After Deploy

- **Submit the new sitemap in Google Search Console** and use "Request indexing" on the five new service URLs. Do not remove the old URLs from the index manually — let the 301s pass their equity across.
- **Test each redirect on the live host** — the Apache 301s are the only layer no local server can exercise. Each old URL should return 301, not 302 and not 404. The static stubs are the fallback if a rule is wrong.
- **Restart any running next dev server.** Moving a route folder does not always register with the running dev server's route manifest, so it will keep 404ing the moved pages until restarted.
- **Update any external links you control** — Google Business Profile, Facebook, Instagram, directory listings and any paid ads pointing at the old URLs. Redirects handle visitors, but direct links are stronger than redirected ones.
- **Expect a short ranking wobble.** Even with correct 301s, Google takes days to weeks to fully transfer signals to new URLs. This is normal; do not change the URLs again during that window.

8. Open Items

BLOCKER — 8 plumbing images still missing. `public/images/services/plumbing-services/` is empty; the plumbing page references 8 files that do not exist. Do not deploy until supplied.

`hero.webp` · `plumber-dubai.webp` · `emergency-plumber-dubai.webp` · `leak-detection-pipe-repair.webp` · `blocked-drain-sewer-cleaning.webp` · `kitchen-sink-drain-plumbing.webp` · `water-heater-repair-dubai.webp` · `bathroom-toilet-sanitary-installation.webp`

- `/services` **itself has no page** and will 404. Visitors commonly truncate URLs, and every service now sits under that path. Recommend building a services index page.
- **backdrop-filter is stripped from the compiled CSS** for `.glass`, `.glass-strong` and `.glass-chip`, so the frosted-glass effect is not rendering. Cause: hand-writing `-webkit-backdrop-filter` alongside the standard property makes Lightning CSS keep only the `-webkit-` form, which current Chrome does not support. Fix is to declare the unprefixed property only.
- **Google Business Profile category** is "Property management company", which does not match a painting/plumbing/electrical business. Under owner review.
- **Sitemap** `lastmod` is build time on every URL, so all 10 change on every deploy. Explicit per-page dates would be a stronger signal.
- **OG image** is 1600×611 (2.62:1) against the 1.91:1 spec, so it is centre-cropped; no `og:image:width/height/alt` emitted.
